**Dialog Medical and NeoTool Development Announce Partnership**

*Use of NeoTool's HL7 interface engine, NeoIntegrate, enables Dialog Medical to enhance interfacing capabilities for its iMedConsent™ application*

ATLANTA, Ga. and MONTROSE, Colo., February 9, 2005 — Dialog Medical, the leading provider of informed consent and patient education systems for hospitals and physician practices, and NeoTool Development, LLC, a provider of integration products, consulting and training to healthcare IT professionals, today announced that Dialog Medical has licensed NeoTool's HL7 interface engine, NeoIntegrate. Through the use of NeoIntegrate, Dialog Medical can facilitate HL7 communications between its iMedConsent application and a hospital's EMR, patient registration and document management systems.

The iMedConsent system enhances and standardizes communication with a patient during the informed consent process and automatically documents the encounter. HL7 connectivity enables clinical users to access advanced iMedConsent features, including the ability to post progress notes to a patient's electronic medical record (EMR) and manipulate signed consent forms on a document management system.

"Our partnership with NeoTool Development expands our existing integration capabilities," said Michael Burke, president of Dialog Medical. "As a result, we can rapidly facilitate the seamless, transparent interfacing of the iMedConsent application with other hospital information systems."

"NeoIntegrate is an 'out of the box' HL7 interface engine that provides deep support for any flavor of HL7. Dialog Medical and its customers will realize significant savings in the time required to customize, install and support interfaces requiring HL7 connectivity," said Dave Shaver, president and founder of NeoTool.

**About Dialog Medical**

Dialog Medical is a leading provider of informed consent and patient education systems for hospitals and physician practices. The iMedConsent™ application is currently used by more than 10,000 physicians and in over 50 hospitals nationwide. For more information on Dialog Medical and its products, visit [www.dialogmedical.com](http://www.dialogmedical.com).

**About NeoTool Development**

NeoTool Development provides integration products, consulting, and training to healthcare IT professionals. NeoIntegrate is NeoTool's next-generation interface engine that provides cost savings and advanced messaging features to software vendors, hospitals, reference labs, and a variety of ASPs offering a broad range of healthcare applications. Making HL7 easier to use and adopt is a key company differentiator. NeoTool is an active participant in the HL7 standards community. NeoTool is on the web at [www.neotool.com](http://www.neotool.com).
