MOBILE SIGNATURE CAPTURE PATIENT ENGAGEMENT

MOBILE SIGNATURE CAPTURE

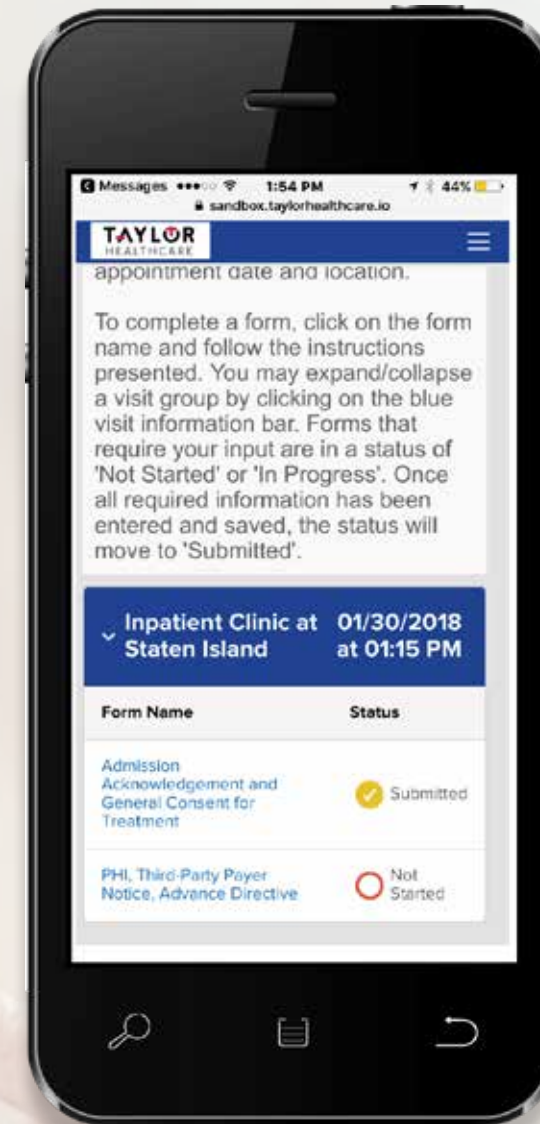

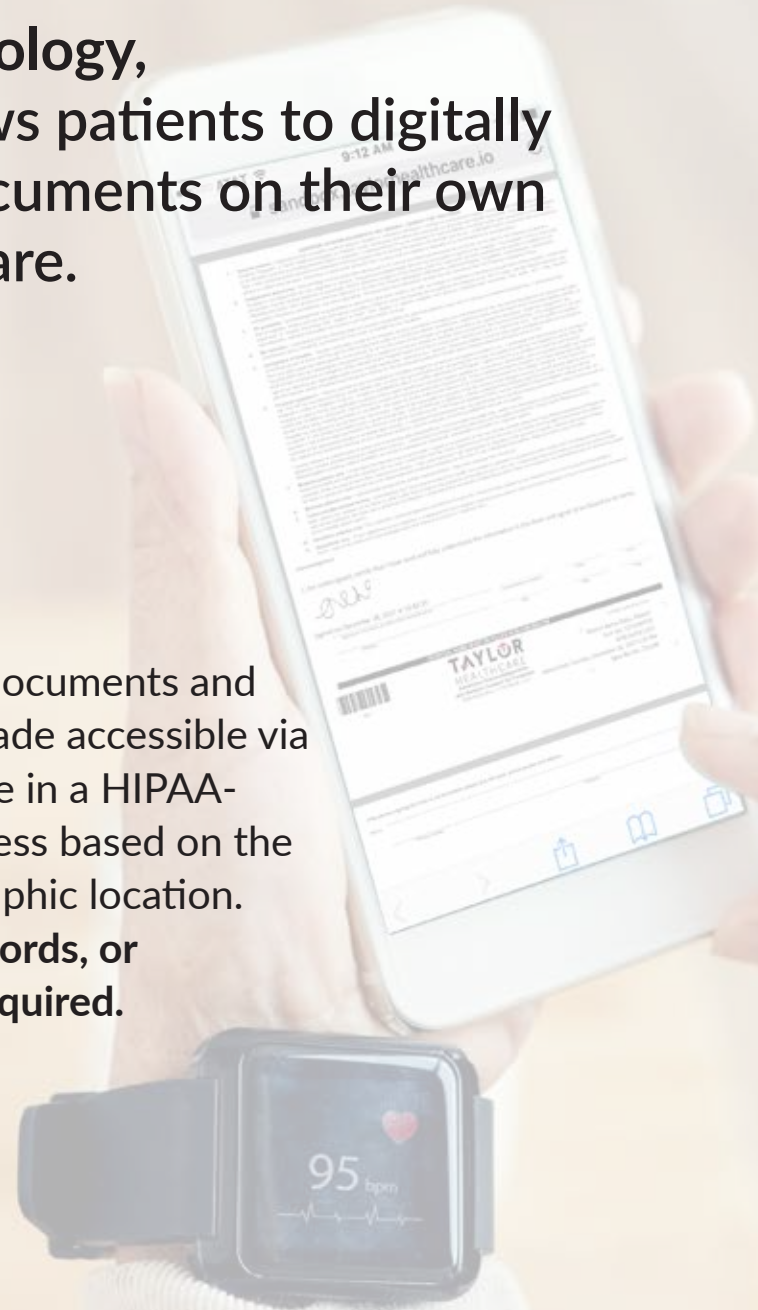

PATIENT ENGAGEMENT TECHNOLOGY

Powered by KLIC-Sign™ Technology, Mobile Signature Capture allows patients to digitally sign and complete required documents on their own smart devices at the point of care.

Patient forms, documents and materials are made accessible via their own device in a HIPAA-Compliant process based on the patient's geographic location. **No apps, passwords, or access codes required.**

Taylor Healthcare rethinks the traditional patient registration process with Mobile Signature Capture

MOBILE SIGNATURE CAPTURE IS AVAILABLE AS AN ADD-ON TO OUR CHECK-IN AUTOMATED REGISTRATION SOLUTION AND OUR INFORMED CONSENT SOLUTION, ALLOWING FOR A MORE ENHANCED, PATIENT-CENTRIC ELECTRONIC FORMS WORKFLOW

FEATURES

- Patients use their own smart phones or device
- HIPAA-compliant KLIC-Sign™ Technology uses GPS to ensure patient location
- Captures signatures fully and securely via smart phone or device
- No apps to install; no user-names or passwords required
- No new hardware costs associated
- Seamless integration with EHR and patient portals

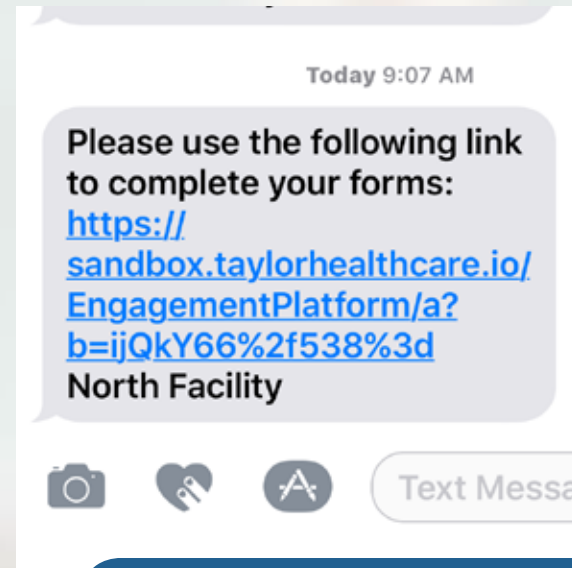

BENEFITS

- Enhances patient communication
- Increases staff efficiency
- Ensures compliance
- Increases patient satisfaction
- Lowers risk of cross-contamination of hardware
- Lowers costs

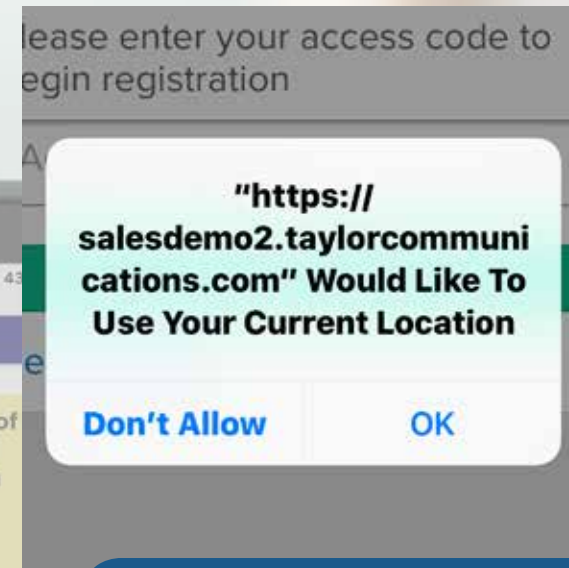

HOW IT WORKS

Patient first agrees to complete their documents via their mobile device

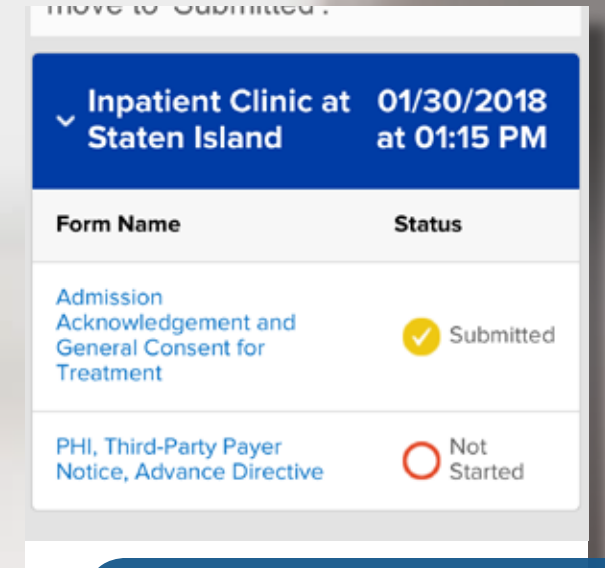

Provider initiates a secured connection by sending link to patient's device using the patient's phone number

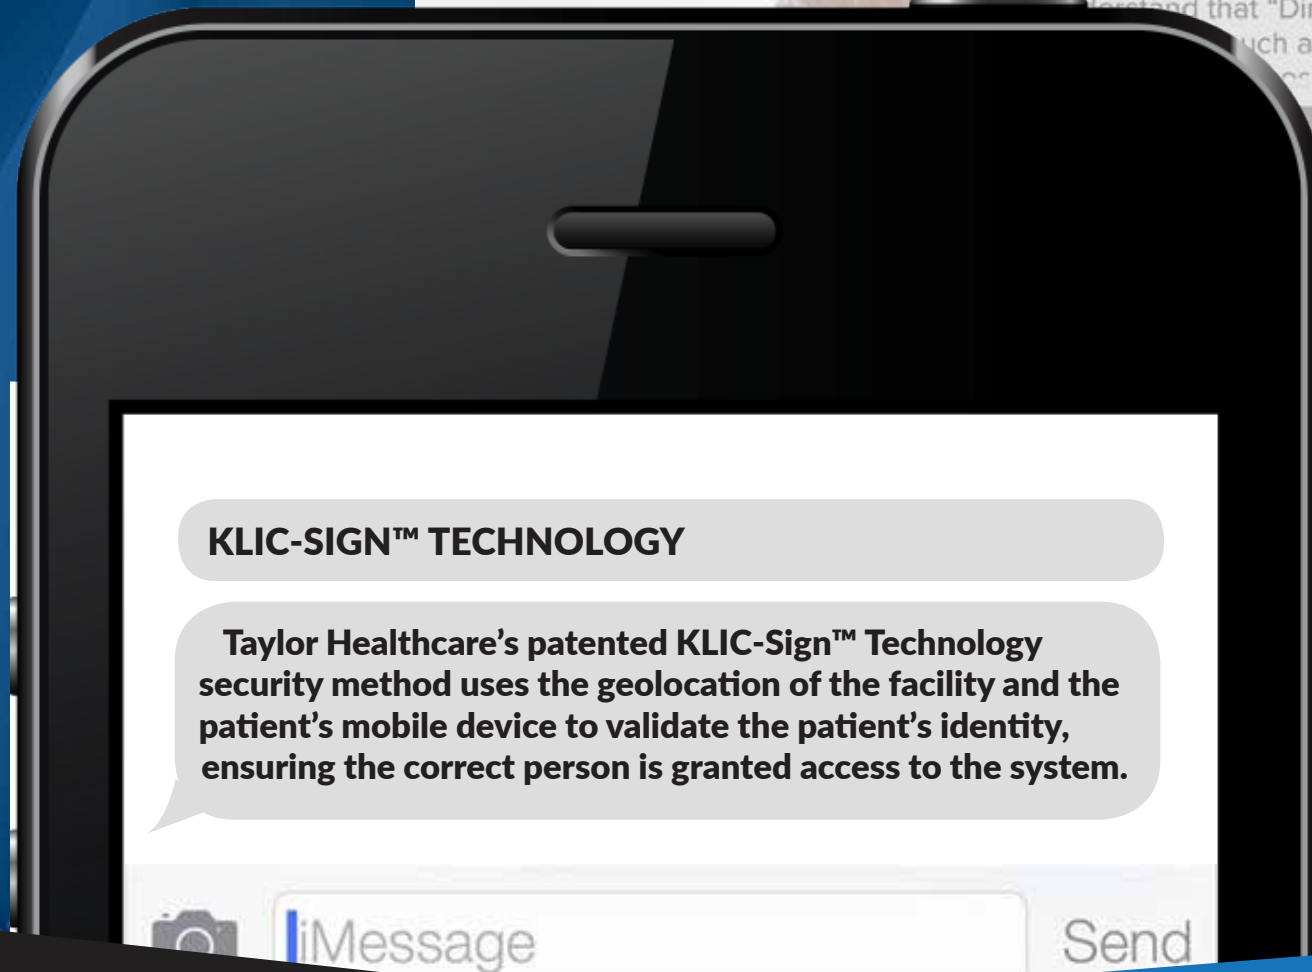

1 Patient receives the text containing a time-sensitive link to complete documents digitally

2 Patient confirms identity using their known physical location and the location reported by their smart device

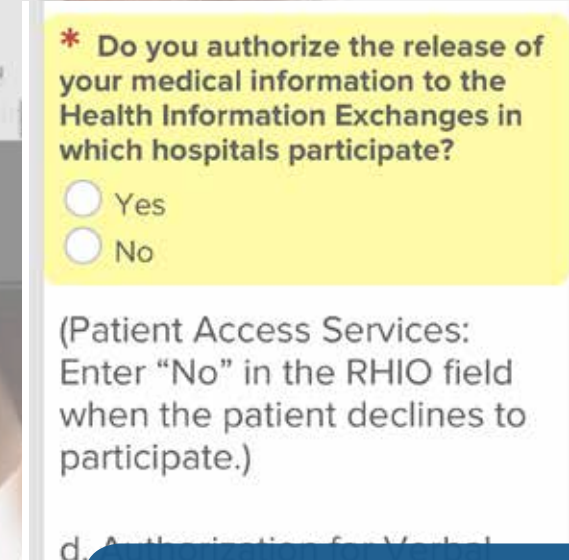

3 Patient views checklist of registration documents required for appointment

KLIC-SIGN™ TECHNOLOGY

Taylor Healthcare's patented KLIC-Sign™ Technology security method uses the geolocation of the facility and the patient's mobile device to validate the patient's identity, ensuring the correct person is granted access to the system.

4 Required fields ensure that patient completes documents entirely.

5 Patient signs document(s) electronically then submits to registrar for review

PATIENT DATA FLOW
